

This feature

documented.

Date: 12/6/2025

Docker was configured to containerize the application & simplify the deployment process. Existing backend services were reviewed to ensure compatibility with docker containers & deployment related issues were identified & resolved.

Date: 15/6/2026

Started with the development of Business Suite project by coordinating work across HR, CRM, Tasks & accounts modules. In the HR module, implemented core organizational management features including departments, roles, employees & user management. Designed the workflow for creating employees & linking them

with system user accounts. Conducted testing to ensure proper authentication & employee data management.

Date: 16/6/2026

Developed attendance management & leave management functionalities within the HR module. Added attendance tracking with check-in & check-out capabilities & implemented leave request submission & approval processes. Improved database relationships between users, employees, roles & departments to support future HR operations.

Date: 17/6/2026

Implemented employee self-service features, allowing employees to access their own profiles, attendance records & leave information after logging into the system. Enhanced role-based access control to ensure

HR administrators & employees have different levels of access. Performed testing & resolved issues related to user permissions & employees data visibility.

Date: 18/6/2026

Integrated updates from the HR, CRM, Tasks & accounts branches into the shared project environment.

Improved the HR dashboard by adding summary statistics, employee information displays & management features. Conducted system testing to verify compatibility between modules & resolved integration related issues.

Date: 19/6/2026

Started development of the Recruitment Management module as part of the HR system. Designed candidate management functionality & recruitment workflow structures. Created recruitment dash-

boards & candidate tracking features to manage applicants through different stages of the hiring process.

Date: 20/6/2026

Enhanced the recruitment module by implementing role-based recruitment pipelines for different job positions.

Added configurable hiring stages, candidate tracking, onboarding work-flows & candidate status management.

Designed the process where successful candidates progress through recruitment stages before being converted into employee records & later assigned

user accounts, completing the major

HR module development activities for this phase of the project
